## SUMMARY

Automation Test Engineer with **3+ years** of experience building Selenium and Playwright automation frameworks from scratch, cutting regression execution time by ~50% and scaling test coverage across 3 enterprise projects. Skilled in Java, JavaScript/TypeScript, API testing, and BDD frameworks (Cucumber, TestNG), with hands-on CI/CD experience in Jenkins and Azure DevOps.

## SKILLS

- |                            |                |                  |
|----------------------------|----------------|------------------|
| ▪ Java                     | ▪ Selenium     | ▪ TestNG         |
| ▪ TypeScript               | ▪ JavaScript   | ▪ Cucumber (BDD) |
| ▪ Performance Testing (K6) | ▪ Jenkins      | ▪ Azure DevOps   |
| ▪ Git                      | ▪ BrowserStack | ▪ Jira           |
| ▪ Postman                  | ▪ AEM          | ▪ Axe DevTools   |

## WORK EXPERIENCE

### Colruyt IT Consultancy India

Jul 2023 – Present

**Promoted twice in under 3 years:** Trainee Test Engineer → Test Engineer 1 → Test Engineer 2

#### Roles Held:

- Test Engineer 2 (April 2026 – Present)
- Test Engineer 1 (April 2025 – Mar 2026)
- Trainee Test Engineer (Jul 2023 – Mar 2025)

#### Key Responsibilities:

- Designed and developed scalable Selenium automation frameworks from scratch using Java, Cucumber, and TestNG for end-to-end web application testing.
- Developed reusable automation components and utilities to improve framework maintainability, scalability, and code reusability.
- Automated 130+ functional and regression test scenarios across three enterprise projects, improving test coverage and reducing manual testing effort.
- Integrated automated test suites into Jenkins and Azure DevOps CI/CD pipelines, enabling continuous execution and faster release validation.
- Implemented parallel test execution using TestNG and Cucumber, reducing regression execution time by approximately 50%.
- Performed API testing using Postman to validate backend services and ensure application reliability.
- Integrated Axe DevTools into the automation framework and performed accessibility testing to improve application usability and compliance.

- Participated in release and regression planning, and reviewed teammates' code to help maintain framework quality standards.
- Performed cross-browser testing to validate consistent functionality across browsers.

## PROJECTS

---

### Efood – Collect & Go

*Technologies: Java, Selenium, JUnit, Cucumber, Gradle, Jenkins*

- Maintained and enhanced the Selenium automation framework using Java, JUnit, and Cucumber for end-to-end web application testing.
- Automated approximately 80% of critical business workflows, significantly reducing manual regression effort.
- Implemented parallel test execution to improve regression execution efficiency.
- **Developed an automated production server health monitoring solution that validated server availability, detected failures, and automatically created P1 incidents for critical issues.**
- Scheduled automated monitoring and regression suites through Jenkins for continuous validation of production environments.

### MACH CoGo BE

*Technologies: Java, Selenium, TestNG, Cucumber, Azure DevOps, Axe DevTools*

- Designed and developed a Selenium automation framework from scratch using Java, TestNG, and Cucumber.
- Implemented parallel execution of Cucumber feature files to reduce regression execution time.
- Designed and implemented fully automated Azure DevOps CI/CD pipelines to trigger different automation suites based on deployment and execution events.
- Configured automated test result publication as build artifacts for improved reporting and traceability.
- **Integrated Axe DevTools into the automation framework to perform automated accessibility testing and generate accessibility reports.**

### AEM Automation (Ongoing)

*Technologies: Playwright, TypeScript, MCP, AI Agents*

- Designing and developing a reusable Playwright automation framework from scratch using TypeScript.
- Building a scalable framework supporting functional, UI, and UI/UX validation with reusable components for multiple applications.
- Implementing visual testing utilities, screenshot comparison, and reusable automation architecture to improve framework scalability.
- Integrating **AI-assisted testing using Playwright MCP and AI agents** to accelerate framework development, automate repetitive testing tasks, and improve developer productivity.
- Developing a framework that can be adopted across multiple projects with minimal configuration changes.

## EDUCATION

---

### 2023 B.Tech/B.E. | Computers

*Jawaharlal Nehru Technological University (JNTU)*
